FCM算法的matlab程序

在https://www.cnblogs.com/kailugaji/p/9648430.html 文章中已经介绍了FCM算法,现在用matlab程序实现它。

作者: 凯鲁嘎吉 - 博客园 http://www.cnblogs.com/kailugaji/

1.采用iris数据库

iris data.txt

```
+
      3.5 1.4

2.matlab源程序

```
responsivity=rand(X num, K); %初始化模糊隶属度矩阵, X num*K
temp=sum(responsivity,2): %把responsivity每一行加起来,把K类加起来,N*1的矩阵
responsivity=responsivity./(temp*ones(1,K)): %保证每行(每类)加起来为1
% FCM算法
for t=1:max iter
   %更新聚类中心K*X dim
   miu up=(responsivity'. ^(alpha))*X; %μ的分子部分
   para miu=miu up./((sum(responsivity. ^(alpha)))'*ones(1, X dim));
   %欧氏距离, 计算 (X-para miu) ^2=X^2+para miu^2-2*para miu*X', 矩阵大小为X num*K
   distant=(sum(X.*X,2))*ones(1,K)+ones(X num,1)*(sum(para miu.*para miu,2))'-2*X*para miu';
   %目标函数值
   fitness(t)=sum(sum(distant.*(responsivity.^(alpha))));
   %更新隶属度矩阵X num*K
   R up=distant. ^(-1/(alpha-1)); %隶属度矩阵的分子部分
   responsivity=R up./(sum(R up, 2)*ones(1, K));
   %[responsivity, para miu, fitness(t)]=FuzzyCM(X, responsivity, K, alpha);
   if t>1 %改成while不行
       if abs(fitness(t)-fitness(t-1)) <eps
           break:
       end
   end
end
%iter=t; %实际迭代次数
\lceil \sim, label 1 = max (responsivity, \lceil \rceil, 2);
3.结果
>> label 1=My FCM(3)
label 1 =
```

由于初始化模糊隶属度矩阵是随机的,所以每次出现的结果并不一样,如果答案与上述不一致,很正常,可以设置迭代次数,求精度。如有不对之处,望指正。
